

# I'll Get Back to You

## Task, Await, and Asynchronous Programming in C#

**Jeremy Clark**  
Developer Betterer  
[jeremybytes.com](http://jeremybytes.com)

Level: Introductory / Intermediate

# Session Survey

- Your feedback is very important to us
- Please take a moment to complete the session survey found in the mobile app
- Use the QR code or search for “Converge360 Events” in your app store
- Find this session on the Agenda tab
- Click “Session Evaluation”
- Thank you!

# Asynchronous Patterns

- Asynchronous Programming Model (APM)
- Event Asynchronous Pattern (EAP)
- Task Asynchronous Pattern (TAP)

# Asynchronous Programming Model (APM)

- Method-Based

- Methods

BeginGetData()

EndGetData()

- IAsyncResult

# Event Asynchronous Pattern (EAP)

- Method/Event-Based

- Method

GetDataAsync()

- Event

GetDataCompleted

Results in EventArgs

# Task Asynchronous Pattern (TAP)

- Task-Based
- Method Returns a Task
  - `Task<T> GetDataAsync()`
- Task
  - Represents a concurrent operation
  - May or may not operate on a separate thread
  - Can be chained and combined

# async & await

- Syntactic Wrapper Around Task
  - “await” pauses the current method until Task is complete.
  - Looks like a blocking operation
  - Does not block current thread
- “async” is just a Hint
  - Does not make a method run asynchronously
  - Tells the compiler to treat “await” as noted above

# Task Properties (.NET 6 / 7)

- Task Properties
  - IsFaulted
  - IsCanceled
  - IsCompleted\*
  - IsCompletedSuccessfully
- IsCompletedSuccessfully
  - .NET 6 / 7
  - .NET Standard 2.1
  - NOT .NET Standard 2.0
  - NOT .NET Framework

\*Note: Means “no longer running”  
not “completed successfully”

# Task Properties (.NET Framework)

- Task Properties

- IsFaulted
- IsCanceled
- IsCompleted\*
- Status

\*Note: Means “no longer running”  
not “completed successfully”

- TaskStatus

- ***Canceled***
- Created
- ***Faulted***
- ***RanToCompletion***
- Running
- WaitingForActivation
- WaitingForChildrenToComplete
- WaitingToRun

# Exception Handling

- `AggregateException`
  - Tree structure
- `Flatten()`
  - Flattens the tree structure to a single level

# Cancellation

- CancellationToken is ReadOnly

```
new CancellationToken(false)
```

```
new CancellationToken(true)
```

- CancellationTokenSource

```
var cts = new CancellationTokenSource()
```

```
var token = cts.Token
```

```
cts.Cancel()
```
